

Graft Versus Host Disease

BHS Course 2026

Prof H el ene Schoemans, MD PhD

KU LEUVEN

DISCLOSURE

HS reports having received personal fees from Incyte, Novartis, MAAT Pharma, Mallinckrodt Pharmaceuticals, Sanofi, BeiGene and the Belgian Hematological Society (BHS), as well as research funding from Sanofi, all paid to her institution and not directly related to this work.

She has also received non-financial support from Pfizer, Sanofi, AbbVie, the EBMT (European Society for Blood and Marrow transplantation) the IACH (International Academy for Clinical Hematology) and the CIBMTR (Center for International Bone Marrow Transplantation Research).

HS acknowledges the support of the UZ Leuven Klinische onderzoeks- en opleidingsraad (KOOR) of the University Hospitals of Leuven, Belgium.

What's in a name?

Graft versus Host Disease

Graft-versus-host disease (GvHD) refers to a **clinical syndrome** caused by the response of transplanted donor allogeneic cells to histocompatibility antigens expressed on tissues of the transplantation recipient.

Physiopathology of acute GVHD

Acute GVHD

Damage associated molecular patterns (DAMPs) & Pathogen associated molecular patterns (PAMPs)

inflammatory cascade

activation of neutrophils, monocytes, dendritic cells & T cells

Organ damage

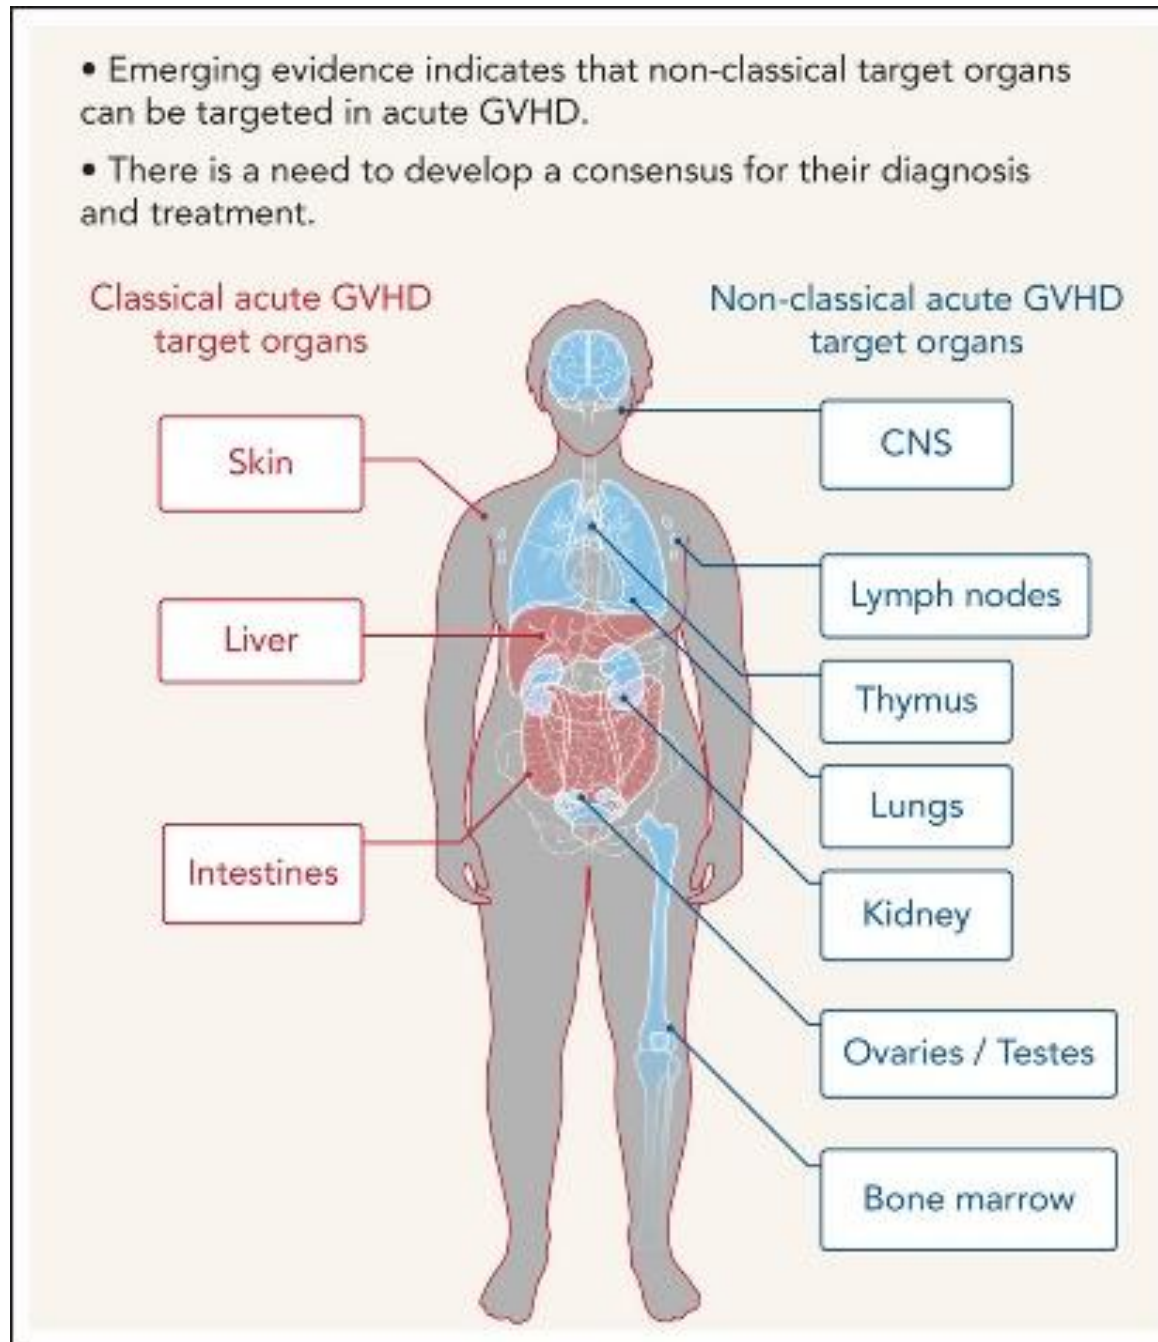

Zeiser R et al. NEJM, 2017.

TYPICAL

aGvHD manifestations :

- GI: anorexia with weight loss, nausea, vomiting, and diarrhea
- Skin: inflammatory maculopapular erythematous skin rash
- Liver: elevated bilirubin

Preventing GVHD

GVHD – prevention

Prevention of GVHD typically relies on a combination of a calcineurine inhibitor (during 3-6 months) with a short course of either MTX or MMF.

Anti-thymoglobuline (ATG) or Alemtuzumab can also be used in addition.

More recently, High dose post transplant Cyclophosphamide (PTCY) has also been used.

(In vitro Depletion of T cells of the graft is also an option.)

Effect of Post-Cy in reduced intensity (US)

A Adjusted GVHD-free, Relapse-free Survival

Tac-MTX-PostCy

Tac-MMF

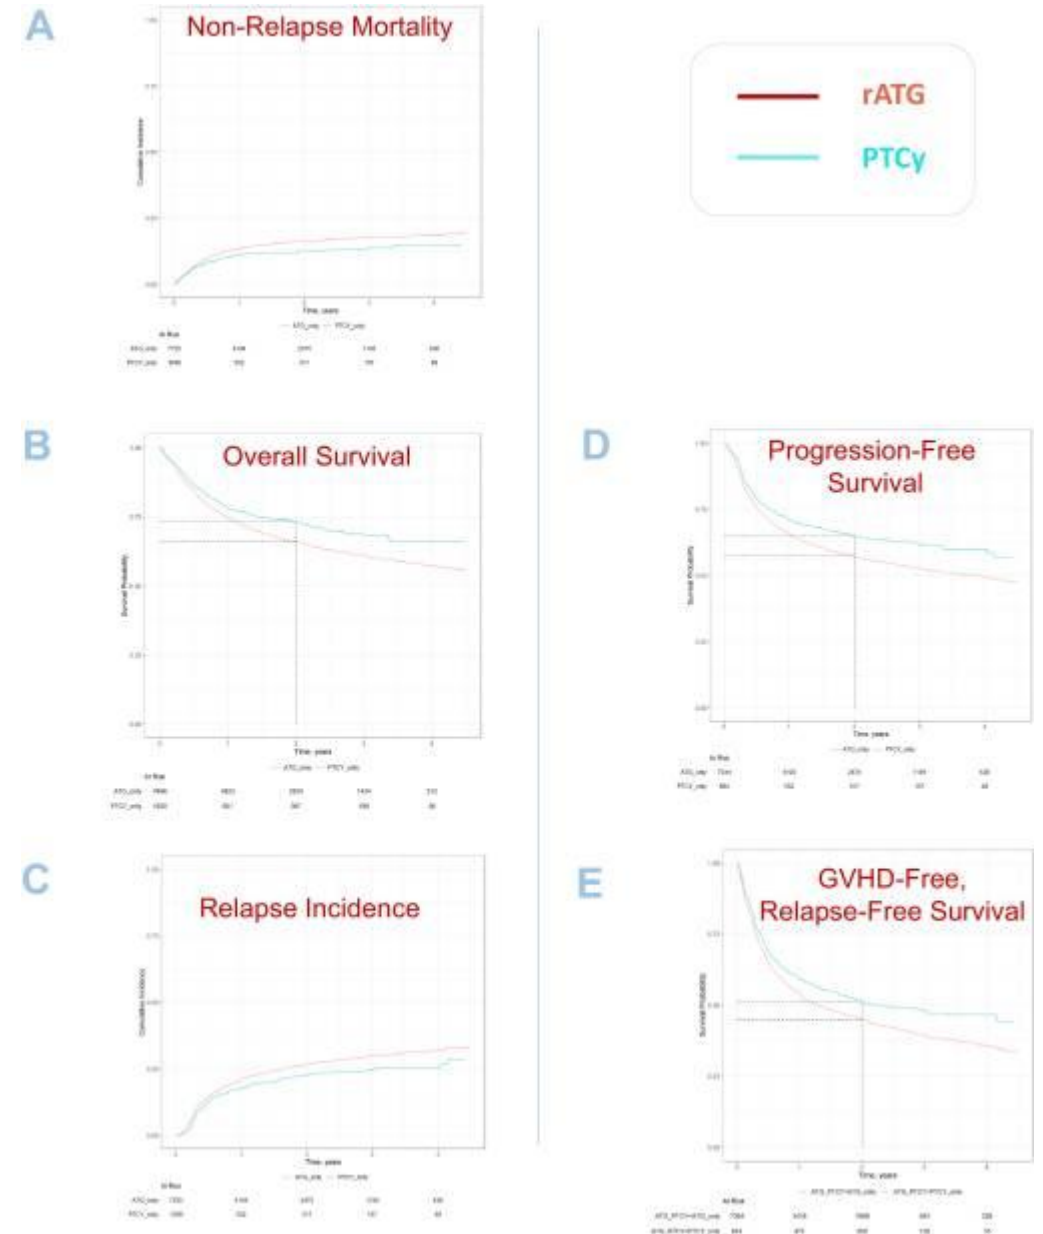

No. at Risk	0	1	2	3	4	5	6	7	8	9	10	11	12
Experimental prophylaxis	214	197	187	172	155	149	138	123	117	116	112	109	24
Standard prophylaxis	217	199	174	164	150	142	125	106	97	87	80	78	14

Randomized BMT CTN trial data
Adult
N=428

PTCY vs ATG MUD in Europe

Better OS	73.1% vs. 65.9%; p = 0.001, HR 0.82
Less NRM	12.1% vs. 16.4%; p = 0.016, HR 0.72.
Less Relapse	22.8% vs. 26.6%; p = 0.046; HR 0.87
Less cGVHD	28.4% vs. rATG 31.4%; p = 0.012; HR 0.77

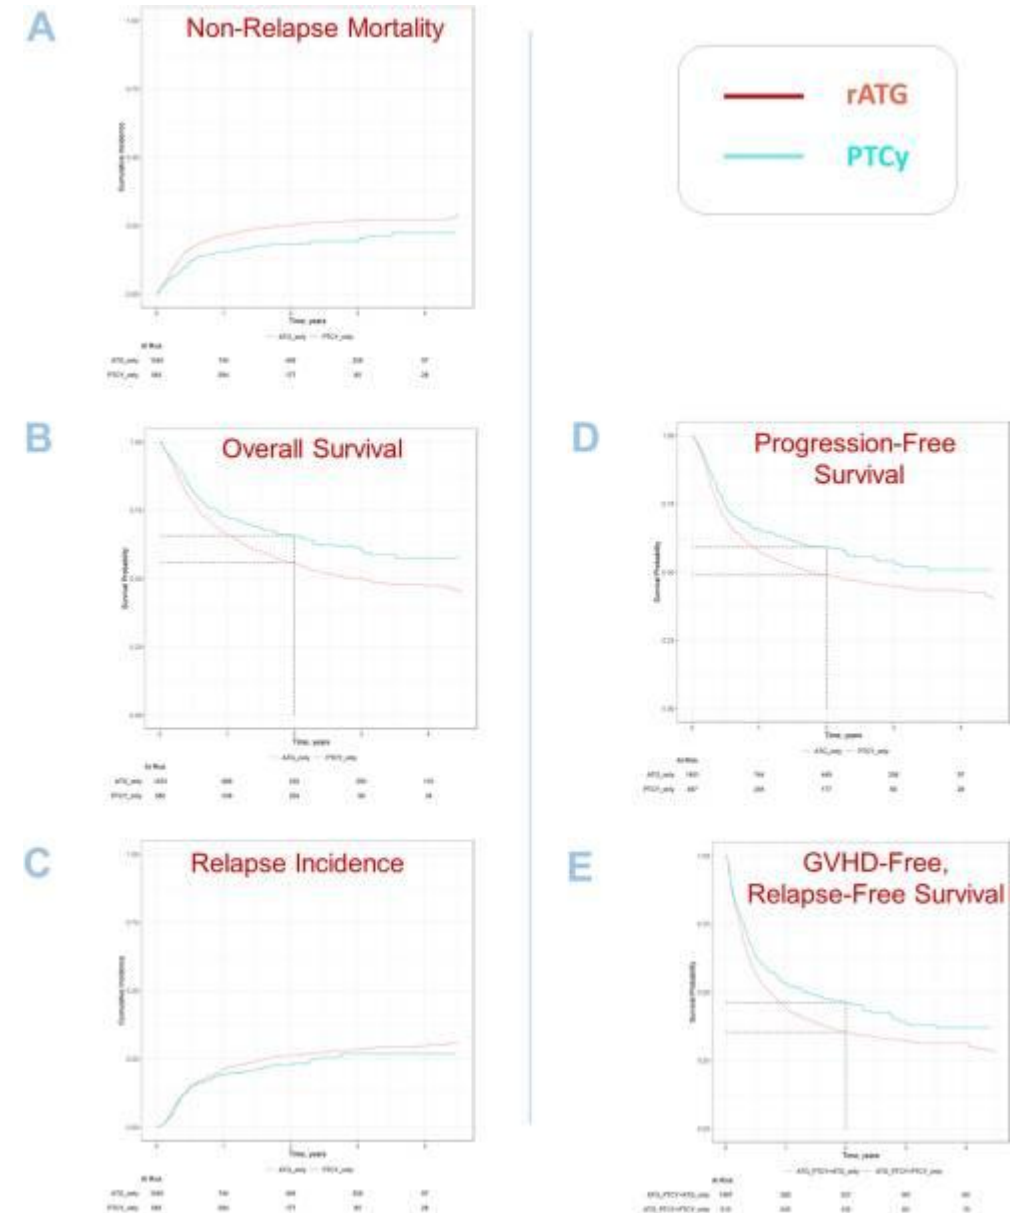

PTCY n=1039; ATG n=7725

PTCY vs ATG MMUD in Europe

Better OS 65.7% vs. 55.7%; $p < 0.001$, HR 0.77
 Less NRM 18% vs. 24.9%; $p = 0.028$, HR 0.74.
 (relapse & GVHD idem)

PTCY n= 583; ATG n=1540

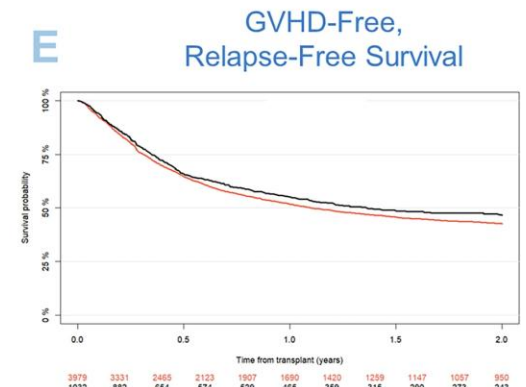

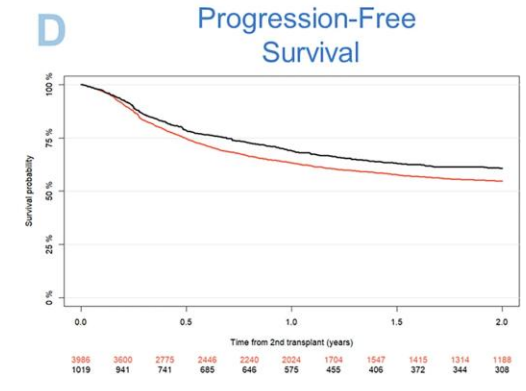

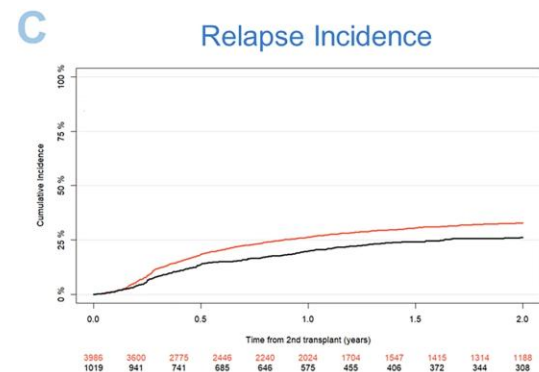

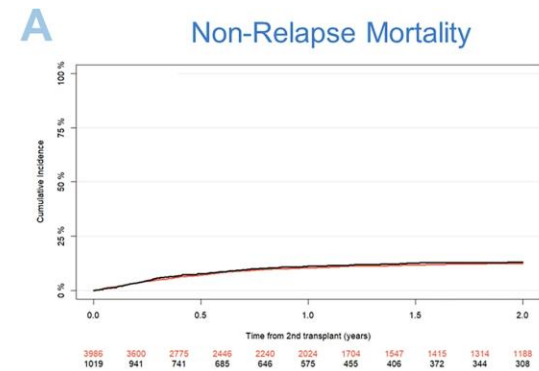

PTCY vs ATG

Matched siblings in Europe

Less Relapse 26.2% vs. 32.8%; HR 0.78, p = 0.003
(OS, NRM & GVHD idem)

PTCY n= 1069 ; ATG n= 4140

Physiopathology of chronic GVHD

Chronic GVHD

Damage associated molecular patterns (DAMPs) & Pathogen associated molecular patterns (PAMPs)

inflammatory cascade

activation B & T cells

fibrotic cascade

Classic or late aGvHD

- GI: anorexia with weight loss, nausea, vomiting, and diarrhea
- Skin: inflammatory maculopapular erythematous skin rash
- Liver: elevated bilirubin

Overlap cGvHD

Classic cGvHD

cGvHD manifestations meeting NIH 2014 diagnostic criteria:

- Skin, nails, scalp, and body hair
- Mouth
- Eyes
- Genitalia
- Esophagus
- Lungs
- Muscles and fascia

You're not sure how to
evaluate cGVHD?

SMMuGGLLE your way out !

Skin

Mouth

Muscles/fascia

G-I / esophagus

Skin ulcers

'Chronic' GVHD

Diagnostic Signs of chronic GvHD

NO BIOPSY needed

Organ	Feature
Skin	Poikiloderma, lichen planus-like, morphea-like, lichen sclerosus-like, sclerotic features
Mouth	Lichen planus-like
Eyes	-
Genitalia	Lichen planus-like, lichen sclerosus-like
GI Tract	Esophageal web, strictures or stenosis in esophagus
Liver	-
Lung	Bronchiolitis obliterans (BOS) with positive lung biopsy
Muscles, fascia, joints	Fasciitis, joint stiffness or contractures sec. to fasciitis or sclerosis

Distinctive Signs of chronic GvHD

Organ	Example
Skin	Hypo/Hyper pigmentation, alopecia ...
Mouth	Hyper keratosis, Sicca, ...
Eyes	Sicca, ...
Genitalia	Ulcerations, ...
GI Tract	-
Liver	Increased liver enzymes (AP and/or ALT) or bilirubine, ...
Lung	Impaired lung function with signs of BOS, ...
Muscles, fascia, joints	Myositis, ...

GVHD of the lungs - BOS

Bronchiolitis Obliterans Syndrome

Peribronchial proliferation between epithelium and smooth muscle

Airtrapping → Obstruction

Bronchiolitis Obliterans Syndrome

- FEV1 < 75% of predicted with $\geq 10\%$ decline over less than 2 years.
- FEV1/FVC < 0.7 or the fifth percentile of predicted.
- Absence of respiratory tract infection.

ALL THREE

One of the 2 supporting features of BOS

- Evidence of **air trapping** by expiratory CT or **small airway thickening** or **bronchiectasis** by HR-CT OR
- Evidence of air trapping by PFTs: **RV > 120%** of predicted OR RV/TLC elevated outside the 90% CI

BOS is associated with high mortality

Seattle Fred Hutch 2002-2006
946 alloTx followed by PFTs

Au et al, BBMT 2011, 1072-1078

Palmer J et al. BBMT 2014;20:337-44

Abedin et al. Biol Blood Marrow Transplant. 2015 Jun;21(6):1127-31.

**Classic or late
aGvHD**

aGvHD manifestations limited to:

- GI: anorexia with weight loss, nausea, vomiting, and diarrhea
- Skin: inflammatory maculopapular erythematous skin rash
- Liver: elevated bilirubin

**Overlap
cGvHD**

Classic cGvHD

cGvHD manifestations meeting
NIH 2014 diagnostic criteria:

- Skin, nails, scalp, and body hair
- Mouth
- Eyes
- Genitalia
- Esophagus
- Lungs
- Muscles and fascia

**Undefined other
cGvHD**

Atypical signs and symptoms of
alloreactivity falling outside the
classical diagnostic criteria

Atypical 'other GVHD'

Suspected Atypical Chronic GVHD Organs and Manifestations

CNS Cognitive Deficits, Meningoencephalitis, Demyelinating diseases, CNS vasculitis*

PNS Neuropathy, Myasthenia gravis

LUNGS COP[#], Non-specific Interstitial Pneumonia[#], PPFE[#]

SEROSITIS Pericardial effusion*, Pleural effusion*, Ascites*

RENAL Proteinuria*, Nephrotic Syndrome*, Tubular, Glomerular, or Interstitial disease*, Vascular disease*

MSK Edema, Muscle cramps, Arthralgia, Arthritis, Myositis

IMMUNE MEDIATED CYTOPENIAS AIHA, ITP, AIN

NIH Defined Chronic GVHD Target Organs and Manifestations

EYES Dry eyes, Keratoconjunctivitis Sicca, Punctate Keratopathy

MOUTH Lichen Planus-Like Features
Ulcers, Xerostomia

LUNGS Bronchiolitis Obliterans or Bronchiolitis Obliterans Syndrome

GI Esophageal web, stricture or stenosis

GU Lichen Planus or Lichen Sclerosus-Like Features
Females: Vaginal Scarring or Clitoral/Labial Agglutination
Males: Phimosis or Urethral/Meatus Scarring or Stenosis

SKIN Poikiloderma, Sclerotic Features, Lichen-Planus, Morphea, or Lichen-Sclerosus-like Features
Depigmentation, Papulosquamous Lesions

MSK Fasciitis, Joint Stiffness, or Contractures due to fasciitis or sclerosis

Treating GVHD

There are at least
4 ways
of staging
acute GVHD
individual organ
severity...

Glucksberg et al, Transplantation; 295-304

Przepiorka D et al, BMT 1995; 825-828

Rowlings PA et al. Br J Haematol 1997; 855-864

Harris et al, BBMT 2016; 4-10

Schoemans et al, BMT 2018; 1401-1415

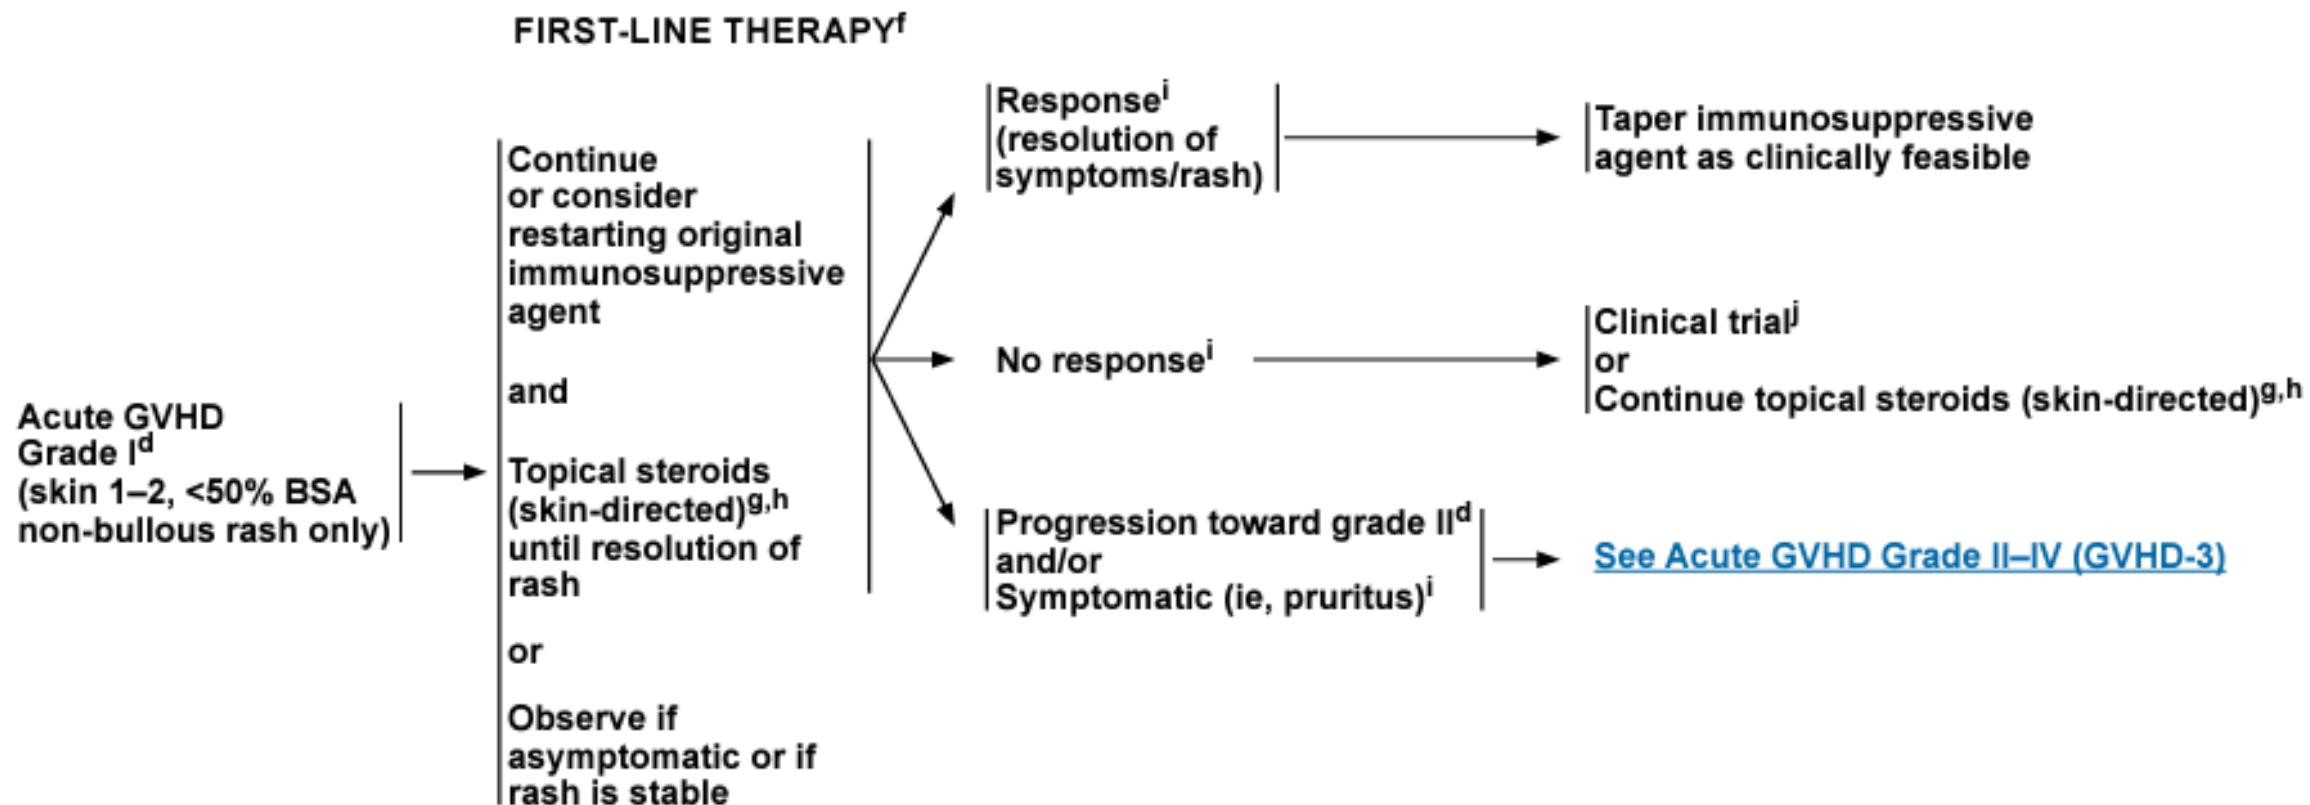

Organ Severity Stage	Original Glucksberg ¹³	Modified Glucksberg or "Keystone criteria" ¹⁴	IBMTR ¹⁵	MAGIC
acute GvHD				
Skin				
0		no rash		
1		Rash <25% of BSA		
2		Rash 25% to 50% of BSA		
3		Rash >50% of BSA		
4	Generalized erythroderma with bullous formation			Generalized erythroderma (>50% BSA) plus bullous formation and desquamation >5% of BSA
Liver				
0	Total serum bilirubin < 34 µmol/L (<2.0mg/dL) or AST/SGOT 150-750 IU	Total serum bilirubin < 34 µmol/L (<2.0mg/dL)		
1		Total serum bilirubin 34-50 µmol/L (2.0 to 3mg/dL)		
2		Total serum bilirubin 51-102 µmol/L (3.1 to 6mg/dL)		
3		Total serum bilirubin 103-255 µmol/L (6.1 to 15mg/dL)		
4		Total serum bilirubin >255 µmol/L (>15mg/dL)		
Upper GI				
0	NA	no persistent nausea with histologic evidence of GvHD in the stomach or duodenum		no or intermittent* anorexia or nausea or vomiting
1	NA	persistent nausea with histologic evidence of GvHD in the stomach or duodenum		persistent* anorexia or nausea or vomiting
Lower GI				
0		Diarrhea <500 mL/day		Diarrhea <500 mL/day or <3 episodes/day for adults** ^a
1		Diarrhea >500 mL/day		Diarrhea 500-999 mL/day or 3-4 episodes/day for adults** ^b
2		Diarrhea >1000 mL/day		Diarrhea 1000-1500 mL/day or 5-7 episodes/day for adults** ^c
3		Diarrhea >1500 mL/day		Diarrhea >1500mL/day or >7 episodes/day for adults** ^d
4	Diarrhea >2000 mL/day	severe abdominal pain with/without ileus		Severe abdominal pain with/without ileus or grossly bloody stools (regardless of stool volume)
Karnofsky index				
	>30%			NA
	<30%			NA

Acute overall GvHD scoring (I-IV) – MAGIC

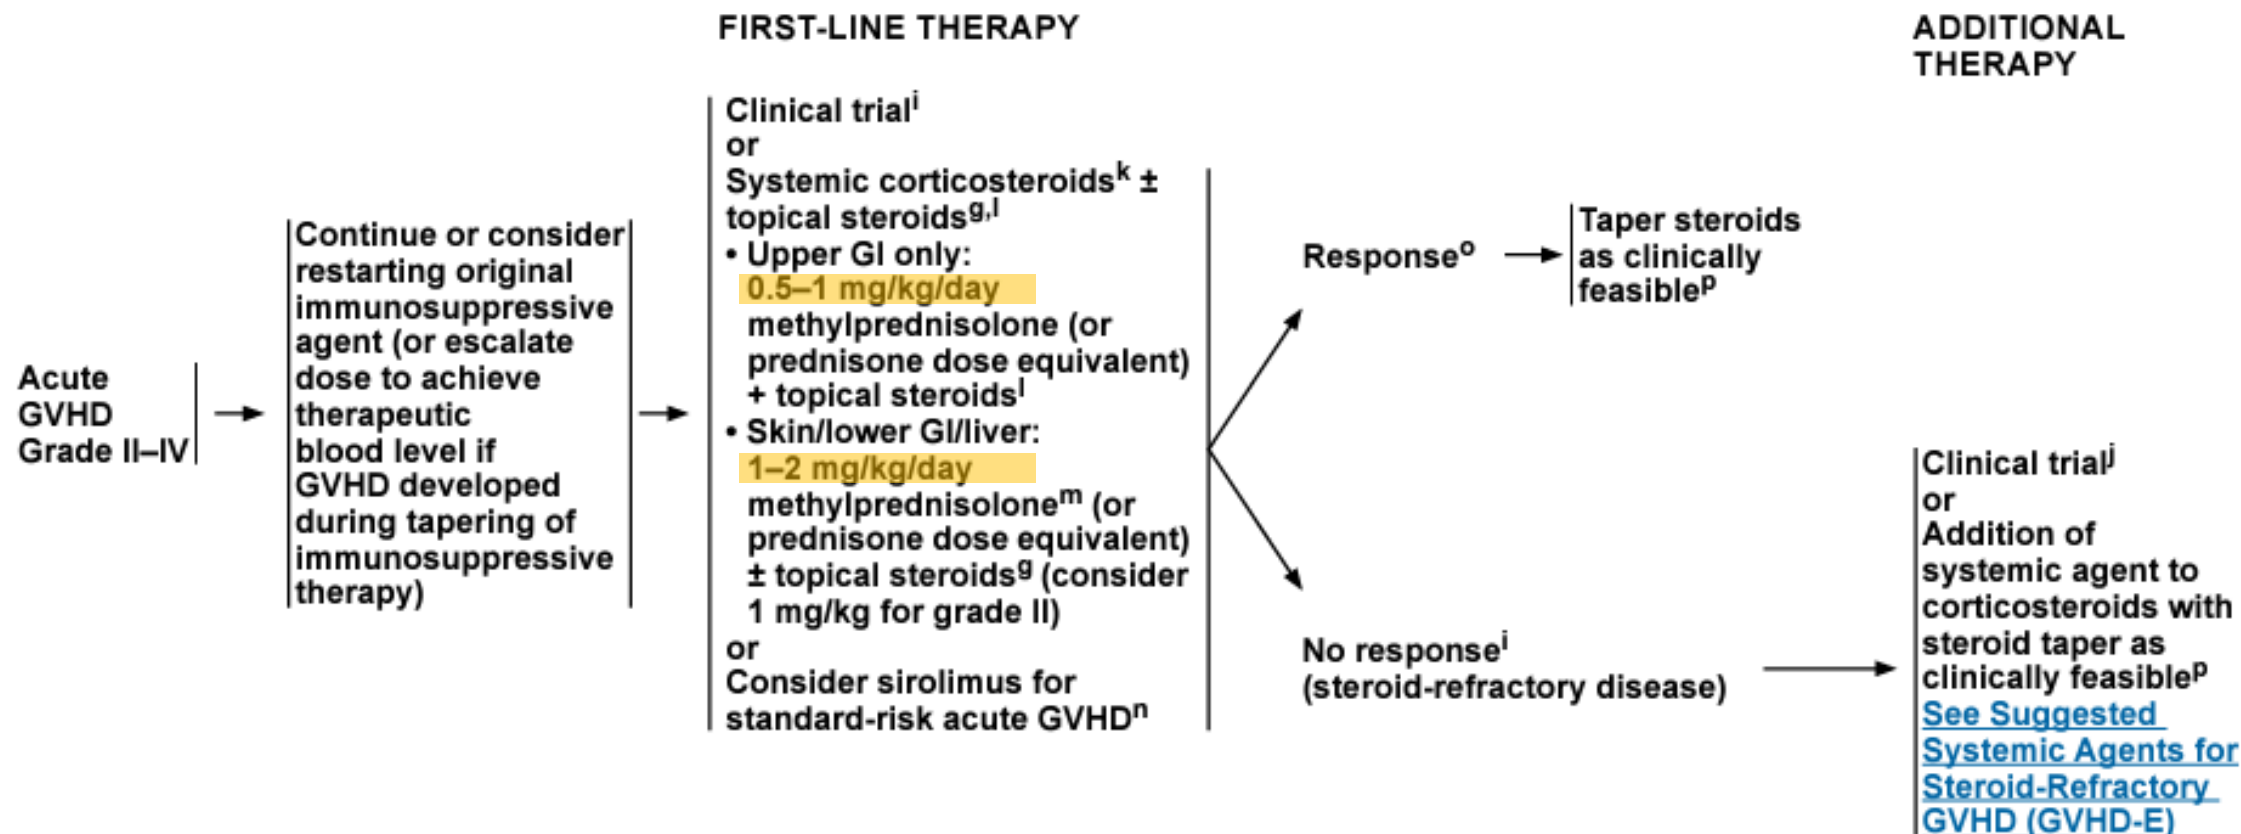

GRADE		SKIN	LIVER	GI
0	NONE	0	0	0
I	Mild	1 or 2	0	0
II	Moderate	3	1	1
III	Severe	-	2 or 3	2 or 3
IV	Life threatening	4	4	4

First-line Therapy of Acute GvHD – grade I

First-line Therapy of Acute GvHD – grade II-IV

ⁿ Standard-risk acute GVHD as defined by clinical risk score and biomarker status of CTN1501 trial: Pidala J, et al. Blood 2020;135:97-107.

Proposed terminology for Steroid response

Steroid	aGVHD	
Refractoriness or Resistance	Progression within 3-5 days of therapy onset with $\geq 2\text{mg/kg/day}$ of prednisone OR Failure to improve within 5-7days of treatment initiation OR Incomplete response after more than 28 days of immunosuppressive treatment including steroids	
Dependence	Inability to taper prednisone below 2mg/kg/day OR Recurrence of GVHD activity during steroid taper	
Intolerance	Emergence of unacceptable toxicity due to the use of corticosteroids	

Steroid refractory acute GVHD treatment

!!! consider a clinical Trial !!!!

Ruxolitinib* (Zeiser et al NEJM 2020)

Alemtuzumab

Alpha-1antitrypsin (AAT)

* FDA approved for GVHD treatment

Ruxolitinib for Glucocorticoid-Refractory Acute GVHD

PHASE 3, MULTICENTER, RANDOMIZED, OPEN-LABEL TRIAL

New therapies for aGVHD

There are at least 4 ways of grading cGVHD severity

Shulman et al. Am J Med. 1980; 204–17
Lee et al. BBMT. 2003; 215–33

Filipovich et al. BBMT 2005; 945–56
Jagasia et al. BBMT 2015; 389–401

Schoemans et al, BMT 2018;1401-1415

		Original Seattle Criteria ²¹	Revised Seattle Criteria ²²	NIH	
DIAGNOSIS					
		NA	NA	based on either the presence of specific diagnostic signs or distinctive signs accompanied by additional confirmation (e.g. biopsy or other objective diagnostic test) in at least one target organ (skin & appendages, mouth, eyes, genitalia, esophagus, lungs and muscles & fascia)	
SEVERITY SCORING					
Limited	Limited skin AND/OR limited hepatic involvement	Limited skin AND/OR limited hepatic involvement OR single organ sicca syndrome (eyes, mouth, vagina)	Mild	no more than two organs with a score* of 1, except for lung	
Extensive	Generalized skin involvement AND/OR major hepatic complications AND/OR an isolated sicca syndrome of the eyes, mouth AND/OR any other organ involvement	Generalized skin involvement AND/OR major hepatic complications AND/OR multiple organs involved (more than two, including 'nails'), the presence of skin sclerosis / serositis or fasciitis, bronchiolitis obliterans, decreased performance status (<60% Karnofsky-Lansky index) or weight loss >15%	Moderate	any other severity scoring* not included in the mild or severe categories	
			Severe	at least one organ with a score* of 3 or a lung score* of 2	

cGVHD scores according to NIH criteria

Eight organs : Skin Mouth Muscles GI Genital Liver Lung Eyes

!! Based on consensus opinion and not on empiric data !!

cGVHD scores according to NIH criteria

# OF ORGANS	MILD
1	Score 1
2	Score 1
3	

MILD = 1 or 2 organs (but not lung) with maximum Score 1

MODERATE = Lung Score 1 **or** \geq three organs at Score 1 **or** at least one organ at Score 2

SEVERE = Lung Score 2 **or** Score 3 in any organ

Systemic Treatment of moderate/severe cGvHD

FIRST-LINE THERAPY

ADDITIONAL THERAPY

Chronic GVHD^q

Clinical trialⁱ
or
Continue or consider restarting original immunosuppressive agent
and/or
Systemic corticosteroids
0.5–1 mg/kg/dayⁱ methylprednisolone
(or prednisone dose equivalent)
±
Topical steroids as clinically indicated^s
and/or
Inhaled steroid^t ± azithromycin^u for lung involvement^{v,w} (eg, FAM [fluticasone, azithromycin, and montelukast])

Responseⁱ

→ Taper steroids as clinically feasible^p

No responseⁱ
(steroid-refractory disease)

Clinical trial^j
or
Addition of systemic agent to corticosteroids with steroid taper as clinically feasible^p
[See Suggested Systemic Agents for Steroid-Refractory GVHD \(GVHD-E\)](#)

Proposed terminology for Steroid response

Steroid	aGVHD	cGVHD
Refractoriness or Resistance	Progression within 3-5 days of therapy onset with $\geq 2\text{mg/kg/day}$ of prednisone OR Failure to improve within 5-7days of treatment initiation OR Incomplete response after more than 28 days of immunosuppressive treatment including steroids	Progression while on prednisone at $\geq 1\text{mg/kg/day}$ for 1-2 weeks OR Stable disease while on prednisone at $\geq 0.5\text{mg/kg/day}$ for 1-2 months
Dependence	Inability to taper prednisone below 2mg/kg/day OR Recurrence of GVHD activity during steroid taper	Inability to taper prednisone below $0,25\text{mg/kg/day}$ in at least 2 attempts separated by 8 weeks
Intolerance	Emergence of unacceptable toxicity due to the use of corticosteroids	

Steroid refractory chronic GVHD treatment

!!! consider a clinical Trial !!!!

Ruxolitinib for Glucocorticoid-Refractory Chronic Graft-versus-Host Disease

PHASE 3, OPEN-LABEL, RANDOMIZED TRIAL

329 Patients who had undergone allogeneic stem-cell transplantation and had glucocorticoid-refractory or -dependent GVHD

Ruxolitinib
10 mg twice daily
(N=165)

Investigator's choice of therapy
(control)
(N=164)

Overall response
(complete or partial response)
at week 24

49.7%
(82 patients)

25.6%
(42 patients)

OR, 2.99; P<0.001

Ruxolitinib showed superior efficacy over control but led to a higher incidence of grade ≥ 3 thrombocytopenia and anemia

Take home message

Take home message

Prevent it

Recognize it early

Score it (Belgian flag & SMMuGGLLE)

Treat grade II-IV or moderate/severe GVHD
with Steroids → Ruxo →...

Beware of highly morbid forms
(sclerosis, dry eyes and lungs)

Think of supportive care & impact on QoL
(even in mild GVHD)
